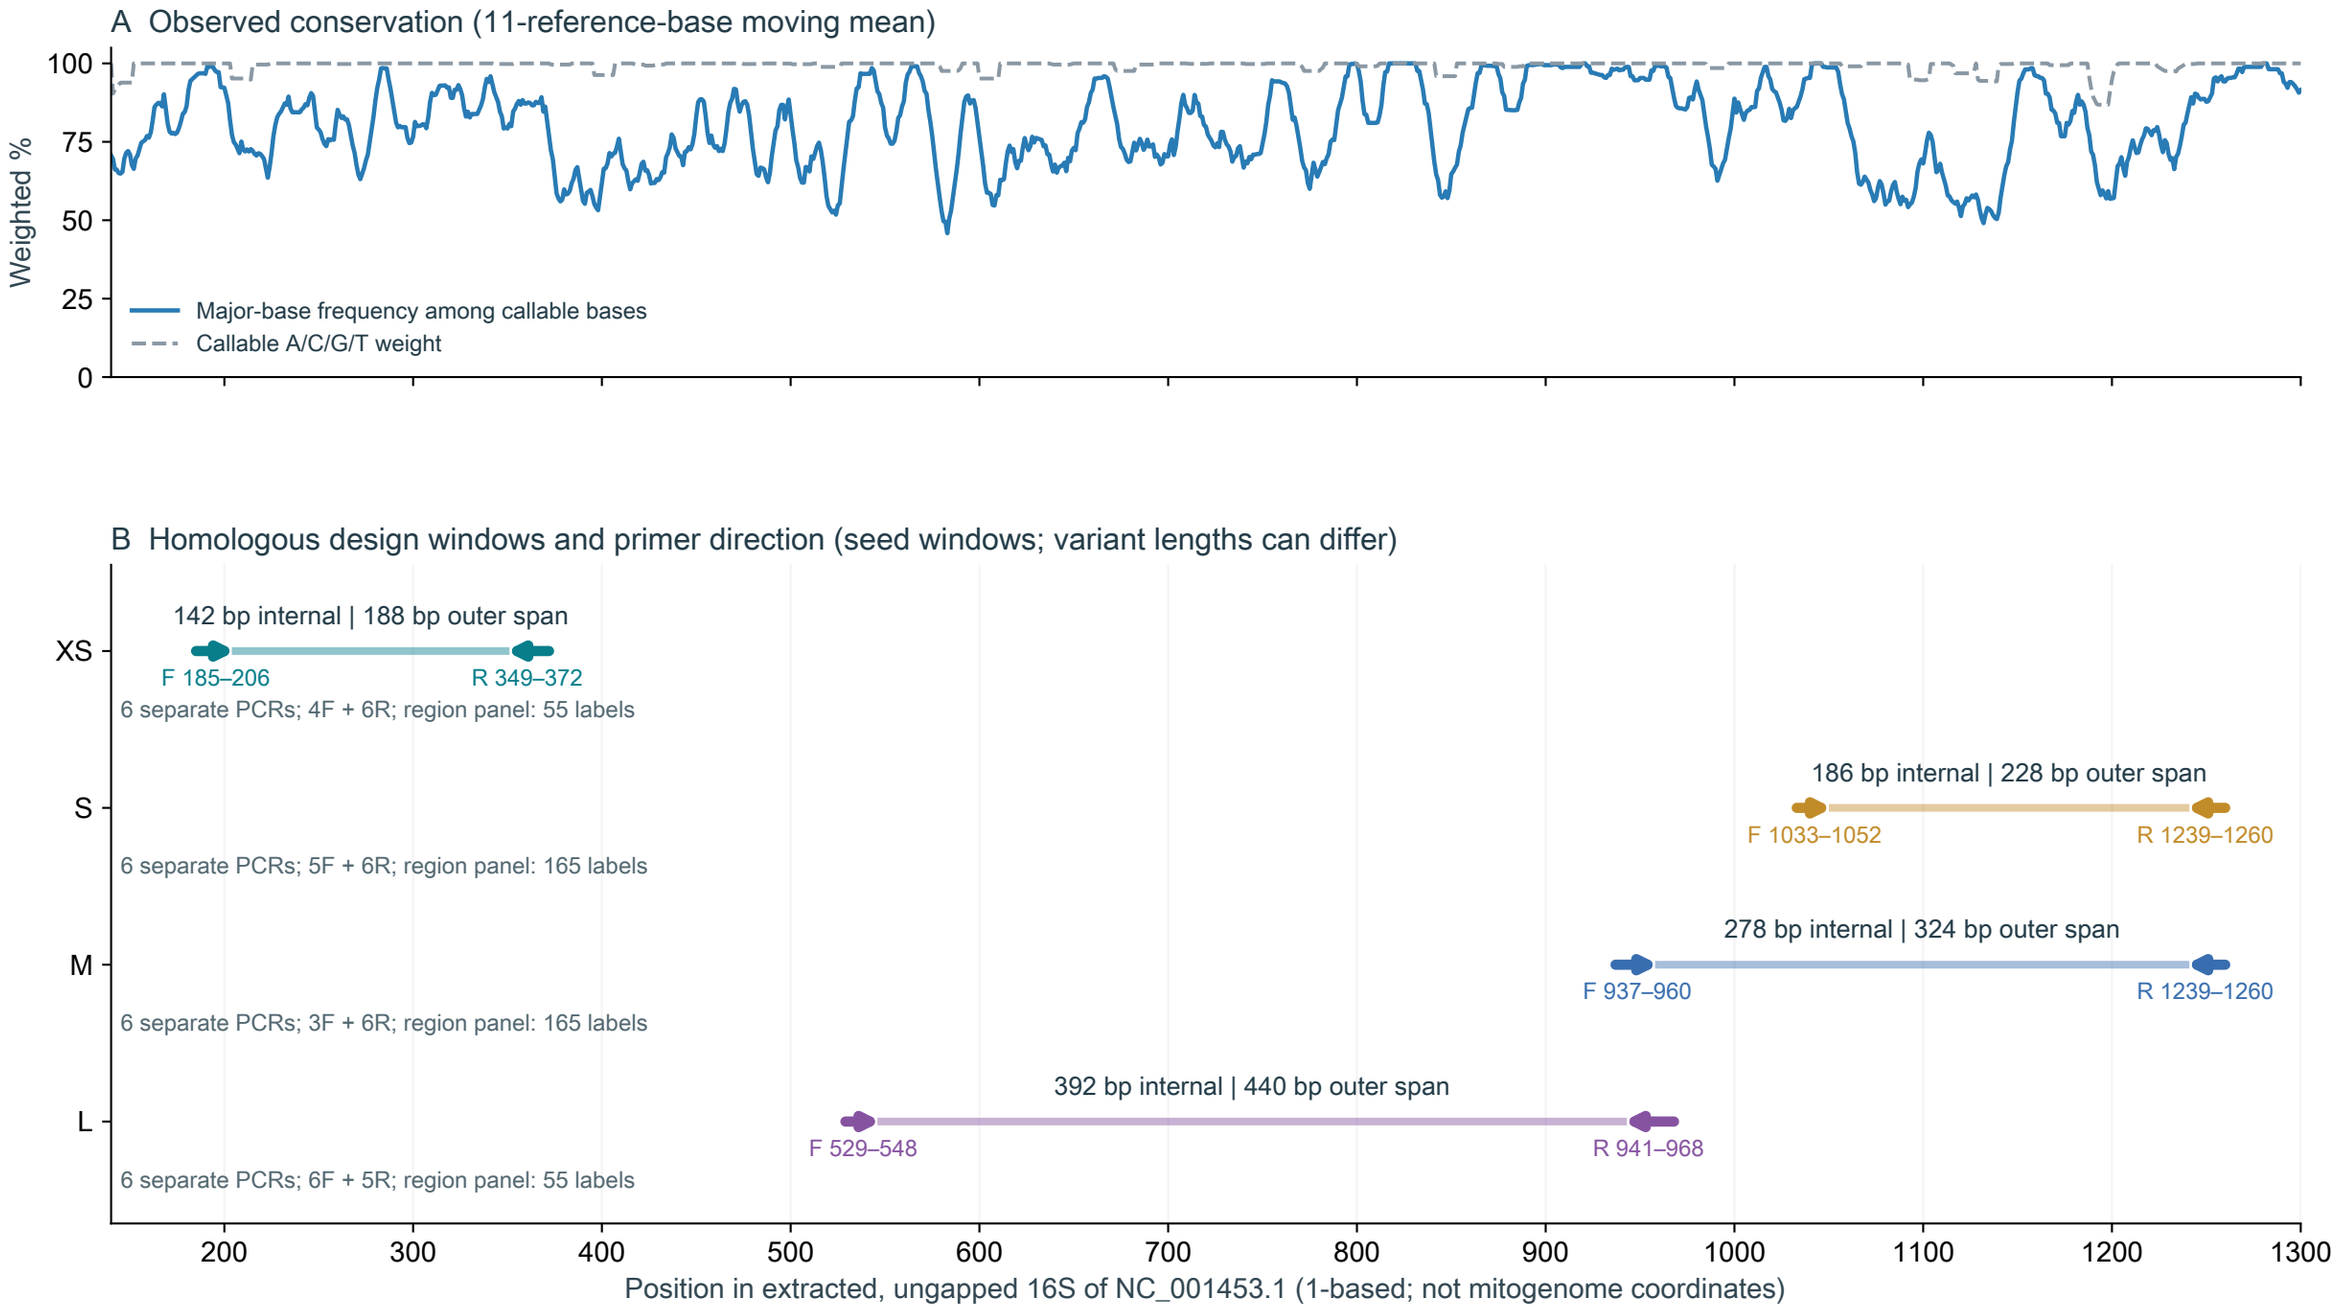
MiUrchin amplicon regions and same-locus supplementation

Common panel: 49 name labels / 80 haplotypes | Reference: Strongylocentrotus purpuratus NC_001453.1



Spans describe reference design windows, not actual product lengths in every taxon. Separate-PCR schemes shown; same-locus variants can differ in length.
Conservation excludes gaps/ambiguous bases; the dashed curve shows callable weight. Region panels differ; 100% in a panel is not class-wide coverage.
